**Description:** FINISHING BOOTH - HYGIENIZATION -  
SANITATION - DISINFECTION

Forced vaporization cabin

Steam operating temperature: 150 ° C

Time-controlled duty cycle in all phases.

Preset for connection to an external MAX 5 bar steam source.

Quiet and powerful fan included.

DUTY CYCLE: it is carried out without the slightest dispersion of steam, which allows energy savings and a better work environment.

Cycle start after door closing.

Forced vaporization through the insertion, during the vaporization cycle, of a jet of hot air that favors the complete distribution of the vapor even in the least accessible areas.

Vaporization is done through a pneumatic valve.

For proper operation, connection to a compressed air source is necessary.
