

Reference: ICS-001

Name: FORMING, FILLING AND SEALING MACHINE

Year: 2011

Brand: THIMONNIER

Width: .

Description: Forming, filling and sealing of "berlingots" machine (with or without spout) of flat PVC or EVA film or any film that can be sealed by radiofrequency.

Radiofrequency welding system that allows a very good quality of longitudinal sealing and sealing/transverse cutting.

Fully PLC controlled and all operating parameters can be adjusted from the touch screen.

Thanks to its specific dispenser, any type of aggressive product can be packed in this machine.

All parts in contact with the product are made of stainless steel.

Production output 1800 to 3000 Bags/H

Bag volume from 50 to 500 ml

Bag length: 70 to 265 mm

Maxi outer diameter of the coil: 400 mm

Inner diameter: 76mm

Includes product exit tape
